

## HPV vaccination coverage by dose number (Australia) for females by age group in mid 2013

Age (in years at mid 2013)		12 - 13	14 - 15	16 - 17	18 - 19	20 -26
Population (in years at mid 2013)		273,953	275,032	281,159	293,992	1,140,989
Total no. of doses notified		690,797	646,074	646,341	655,328	1,929,269
Coverage Rate (as at 30 June 2016)	DOSE 1	88%	83%	81%	79%	64%
	DOSE 2	85%	79%	78%	75%	57%
	DOSE 3	79%	73%	71%	69%	48%

### NOTES

- ◆ Data extracted from the National HPV Vaccination Program Register (HPV Register) as at 12 JULY 2016 and includes females vaccinated between APR 2007 and JUNE 2016.
- ◆ Includes doses that comply with the recommended vaccine dosage and administration as per the Australian Immunisation Handbook (up to 3 doses administered at prescribed intervals).
- ◆ Population is Estimated Resident Population (ERP) 2013 (as at 30/06/2013) from the Australian Bureau of Statistics (ABS) - 2013 Preliminary Estimated Resident Population by Local Government Area (2012 LGA boundaries) by Sex and Single Year of Age (10 to 40 years) - custom report prepared April 2014.
- ◆ Age is age as at date of ERP estimate (30th June 2013).
- ◆ Coverage is calculated as doses administered and reported to the HPV Register/Estimated Resident Population expressed as a percentage.
- ◆ Excludes consumers who do not wish their details to be recorded on the HPV Register.

- ◆ Dose number is calculated according to the number of doses held by the register for each person. Incoming records are matched to existing records for that person and date of administration is used to determine the dose number.
- ◆ The National HPV Vaccination Program initially provided quadrivalent HPV vaccine for all females aged 12-26 years as at mid 2007 ( school program commenced April 2007 and GP/community program in July 2007) until end December 2009. From 2009 the Program offered HPV vaccination routinely to females in the first year of high school (usually at 12-13 years). From 2013, males were also offered HPV vaccination routinely in the first year of high school (age 12-13 years), with a catch-up program available for males aged 14-15 years in 2013 and 2014.
- ◆ HPV Vaccination doses administered through general practice and in other community settings may be incompletely notified to the HPV Register. The extent of under notification differs by jurisdiction, with the Northern Territory and Queensland expected to have the most complete notification, due to notification of doses via State based immunisation registers.
